Instructions for Installing the SimpleChat Application (USING ECLIPSE)

Importing the OCSF Framework into Eclipse

Perform the following steps to import the OCSF framework into eclipse.

1. Download the OCSF framework compressed file (the file is attached to this assignment)
2. Place the uncompressed OCSF folder in your eclipse workspace
3. In eclipse, click File>New>Java Project
4. Specify "OCSF" for the project name and press "Finish" (if you are prompted to create a module, click on the "Don't create" button)

This will create the OCSF project and automatically load the Java files in the OCSF directory (since you uncompressed the file in your workspace).

## Importing the simpleChat application into Eclipse

After cloning the https://github.com/husseinalosman/simpleChat repository, perform the following:

1. In eclipse, click File>New>Java Project
2. Uncheck the "Use default location" checkbox
3. Press "Browse" and specify the location of your simpleChat local repository (the directory that was created after cloning the simpleChat GitHub repository)

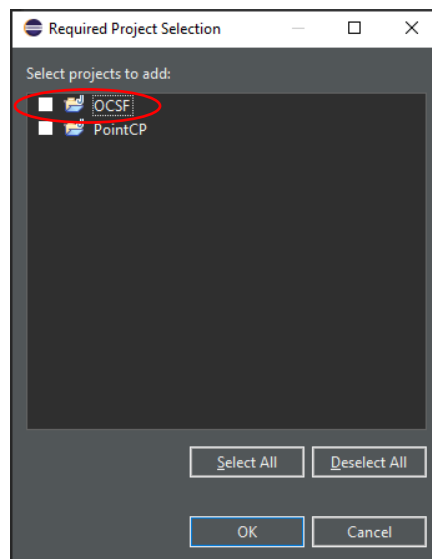

4. Press "Next"

5. To place the OCSF framework in the path, click on "Projects", press on Classpath, and then click on "Add…"

6. Select the OCSF project and press "OK"

7. Press "Finish"
